

# Our Classic Outbuilding Range

A collection of five modular sizes – suitable for almost any application. The number of bays is unlimited and additional features such as logstores, stairs, windows and doors can be added. Additional panels, internal divisions and open bays can all be incorporated.

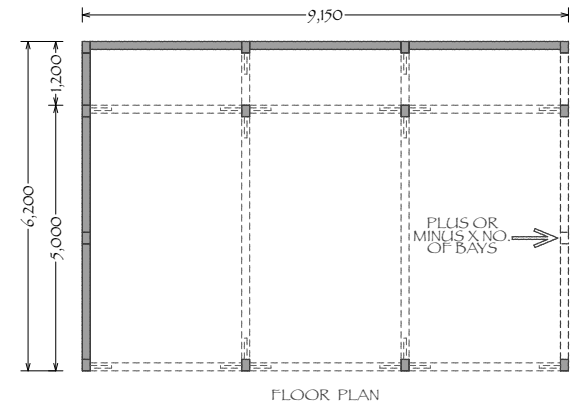

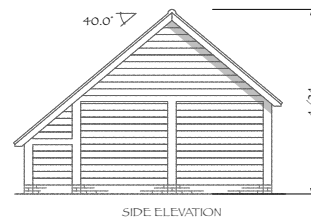

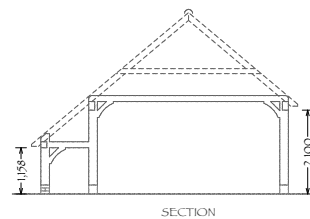

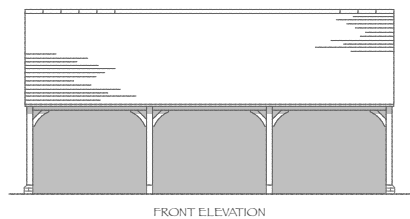

## Classic I

Under 4m in height means that this building can meet Permitted Development requirements and provide a low impact outbuilding that still has plenty of space – perfect for garaging or garden storage.

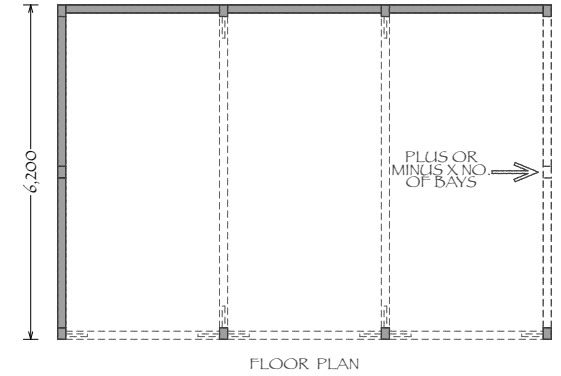

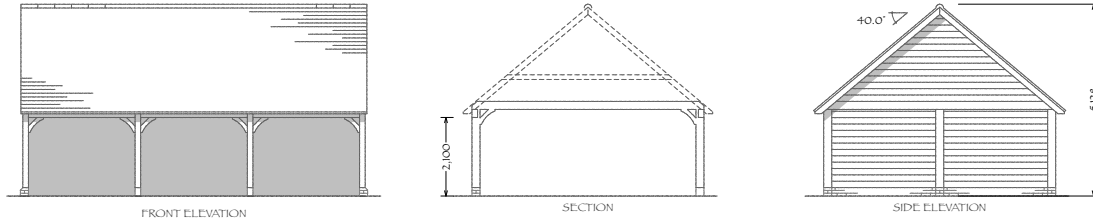

## Classic II

Slightly deeper than Classic I and with an increased roof pitch, this is still a low impact outbuilding that doesn't compromise on floor space so can be used as a garage for most cars.

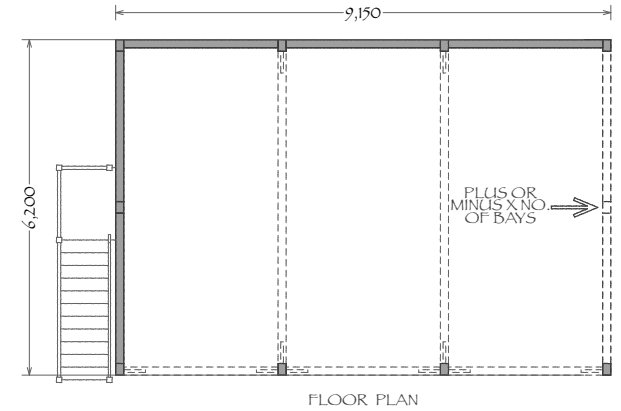

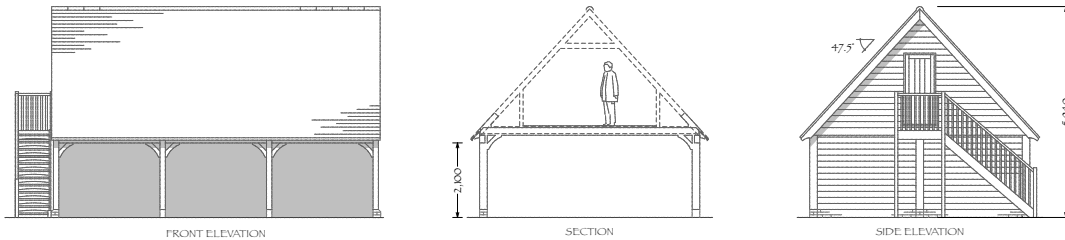

### Classic III

A full pitched roof gives this building classical proportions and provides a handsome building for garaging.

### Classic IV

An increased roof pitch and upgraded roof construction means a 1st floor can be incorporated into this outbuilding - garaging with the benefit of additional accommodation, storage, office, games room for the kids...or man cave!

### Classic V

An increase in the eaves height creates a 1.5 storey structure giving optimum headroom on the 1st floor - the ideal solution for additional accommodation of any sort.
